An easy-to-use aid for basic instruction in linear metric measurement!

8 separate metric line measurement charts, drawn to a common one-meter length, illustrate basic linear units. Four display the meter and its divisions into decimeters and centimeters. Four other lines precisely compare American units and metric units: meter and inches, centimeters and feet, centimeters and inches, and centimeters and a yard. Drawn to the basic unit of one meter, the lines may be used individually or together for extended comparison and conversion activities. Helpful for individual, small group and class instruction. "Write and wipe" surface.
